

DIRECTIONS

If you ordered the Regenix Jump Start Kit, please complete this questionnaire before starting the treatment. It will take approximately 3 weeks to receive your results from this analysis. You will receive a detailed letter explaining any problems that were identified along with microphotographs* of your hair samples.

*** The number of microphotographs depends on the number of usable hair samples received.**

Step 1 - Fill out the questionnaire - please **PRINT** clearly.

Step 2 -Take the Loose Hair Samples

When taking hair samples, do it right before you take a shower; that way, you haven't shampooed for a while and there will be some loose hairs ready to come out. Do not pluck out the hair with tweezers!

1. Locate an area on your scalp that corresponds with an area on the diagram.
2. Grasp a tuft of hair close to the scalp with your thumb and middle finger.
3. Gently squeeze the hairs while simultaneously pulling the hair upwards.
 - a. Ideally, a few loose hairs should be released from the scalp. In order to perform a more thorough analysis, 2 to 3 hairs should be removed from each of the designated areas and adhered to the diagram.
 - b. The bulb must be visible. It appears as a small white ball on the end of the hair that came from the scalp.
4. Using tape, affix your samples to the corresponding areas on the diagram. **DO NOT** place the tape over the bulb.
5. Send the form with your samples attached to the following address:

REGENIX
Cedars–Sinai Medical Office Towers
8631 West Third Street
Suite 420E
Los Angeles, CA 90048

Questionnaire

NAME _____ DATE: DAY _____ MONTH _____ YEAR _____
 HOW DID YOU HEAR ABOUT REGENIX _____ EMAIL _____
